Professional Summary

Innovative Full-Stack Web Developer and Designer with a strong foundation in graphic design and modern application architecture. Specializes in building responsive, scalable web applications and corporate websites from concept to deployment. Adept at leveraging AI-assisted development workflows to rapidly prototype and deploy robust solutions. Proven expertise in front-end aesthetics, complex back-end API integrations, database management, and deep web administration debugging.

Technical Proficiencies

Languages: JavaScript, Node.js, Python, SQL

Frameworks & Libraries: React.js, Next.js, Express.js, Tailwind CSS

CMS & Web Admin: WordPress, Elementor Pro, API Debugging, Browser Console Diagnostics

Databases & Storage: PostgreSQL, MongoDB, Firebase, AWS S3 / MinIO

Tools & Deployment: Git, Docker, Nginx, Axios, Postman, Vercel, Heroku, Render

Core Competencies: UI/UX Design, AI-Assisted Development (Claude, ChatGPT), Agile Workflows, Full-Stack Architecture

Professional Experience

Freelance Full-Stack & Web Developer | Alexandria, VA | 06/2021 – Present

Design and deploy custom web applications and corporate websites, utilizing AI-assisted tooling to drastically accelerate project timelines, scaffold logic, and ensure clean, scalable code.

Developed comprehensive corporate web projects utilizing WordPress and Elementor Pro, successfully engineering features such as searchable brand product catalogs and complex CSV data import integrations.

Manage end-to-end development, bridging front-end graphic design principles with robust back-end logic to deliver highly engaging user experiences.

Web Administrator | Endeavor Turnover LLC | 05/2025 – 08/2026

Performed advanced web administration and deep browser console diagnostics to ensure platform stability.

Successfully troubleshoot and resolved critical network permission failures and API authorization issues, including complex 403 Forbidden errors within the Endeavor Now Admin Portal.

Instructed team members and trainees on web platform operations, site navigation, and the utilization of internal sales tracking tools.

Web Developer | Plantie | 2021

Developed backend architecture and seamlessly connected front-end components to API endpoints.

Ensured reliable data flow and rigorous endpoint testing utilizing Axios and Postman.

Technical Projects

CannaJournal | React, Node.js, Express, PostgreSQL, Docker, Nginx, AWS S3

Engineered a full-stack journaling application featuring a public community feed, pagination, and hashtag highlighting.

Implemented client-side compression and media uploads with drag-and-drop reordering, utilizing S3-compatible storage with a local-disk fallback.

Secured the application with JWT authentication, role-gated routes, and rate limiting, containerizing the stack with Docker Compose for production deployment.

Game Development Portfolio | JavaScript, AI-Assisted Tooling

Designed, coded, and published six browser-based games (Galaxy Shooter, TreasureQuest, MonsterGem, Spirit Wolf, HyperSpace, JumpKat) spanning action and platformer genres.

Utilized AI tooling to scaffold game logic, rapidly iterating from initial concept to fully playable, published builds.

Education & Training

Software Engineering Immersive

General Assembly | Certificate of Completion (07/2022)

Associate of Arts: Graphic Design

Sanford Brown College, McLean, VA
